

App Video Wall

Create App Video Wall

- Whether you are setting up a Web or App Video Wall, the configuration process is identical. Here's how to create your very own App Video Wall

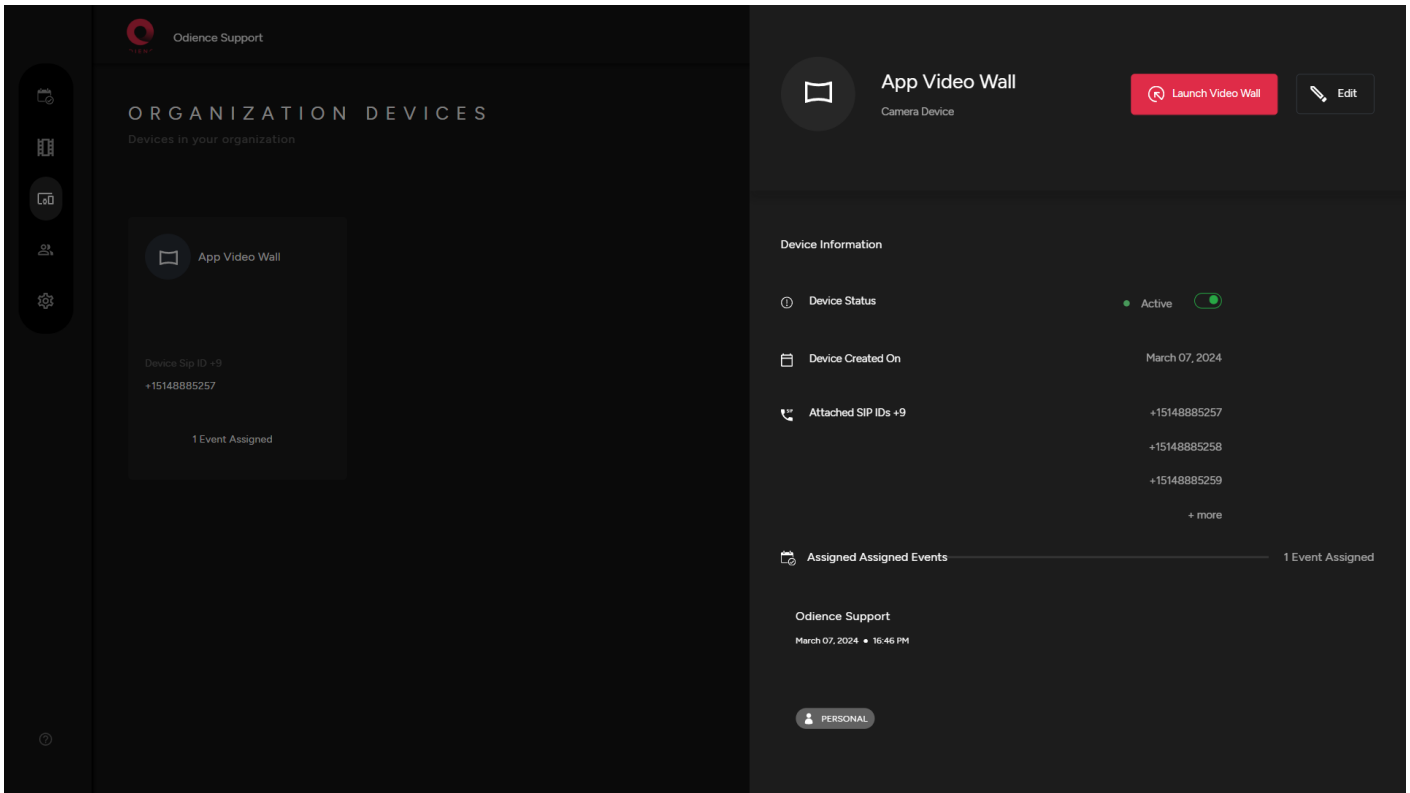

1) Provide a Wall Name, select the Wall Type & then Assign it to an event.

The screenshot shows a dark-themed configuration page titled "ADD VIDEO WALL" with the subtitle "Enter your Device details." The page contains two main sections. The first section, "Wall Name *", features a text input field with the placeholder "Enter Device Name". The second section, "Wall Type *", has a dropdown menu currently set to "APP". To the right of these fields, there is an "Assigned Event" section with a calendar icon and a red button labeled "Assign an Event". Below this is a large rectangular area with a dashed border and the text "There is no event assigned to your Device currently".

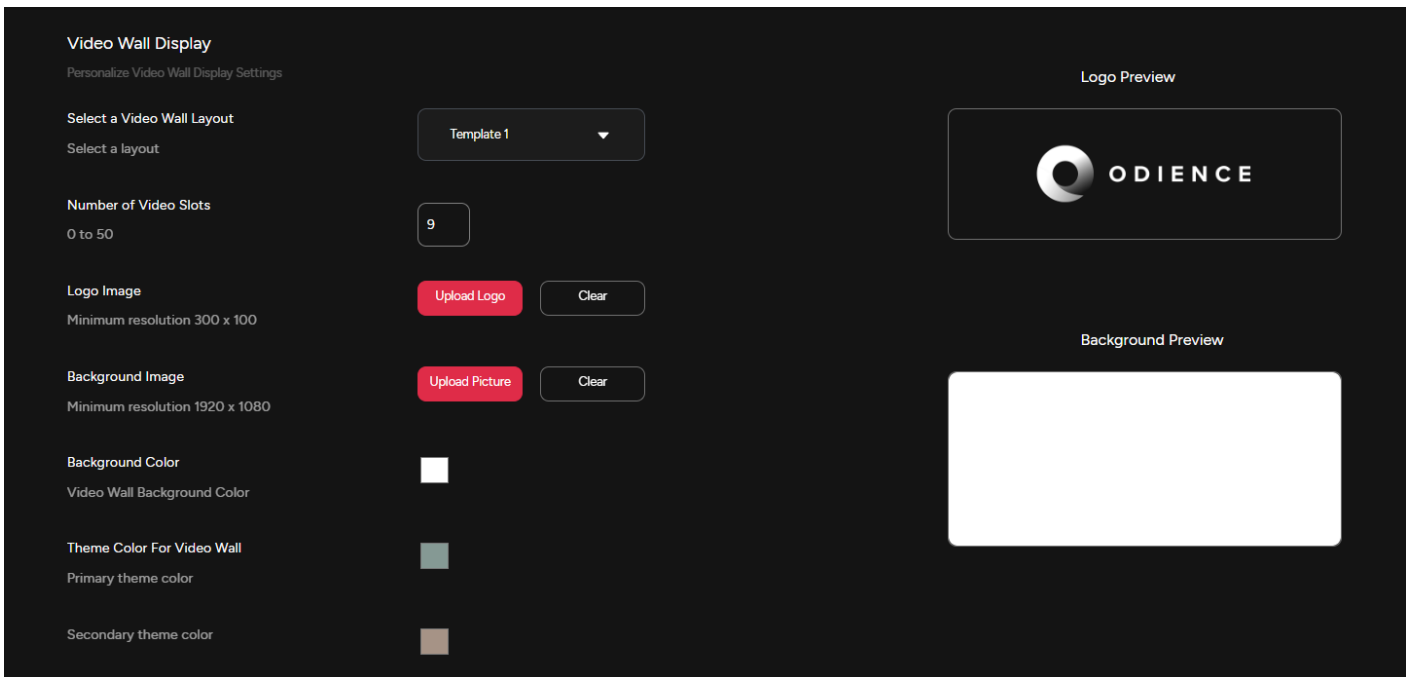

Launch

2) Launch App Video Wall and go through installation process.

Customize

3) Customize Video Wall display settings to fit your style.

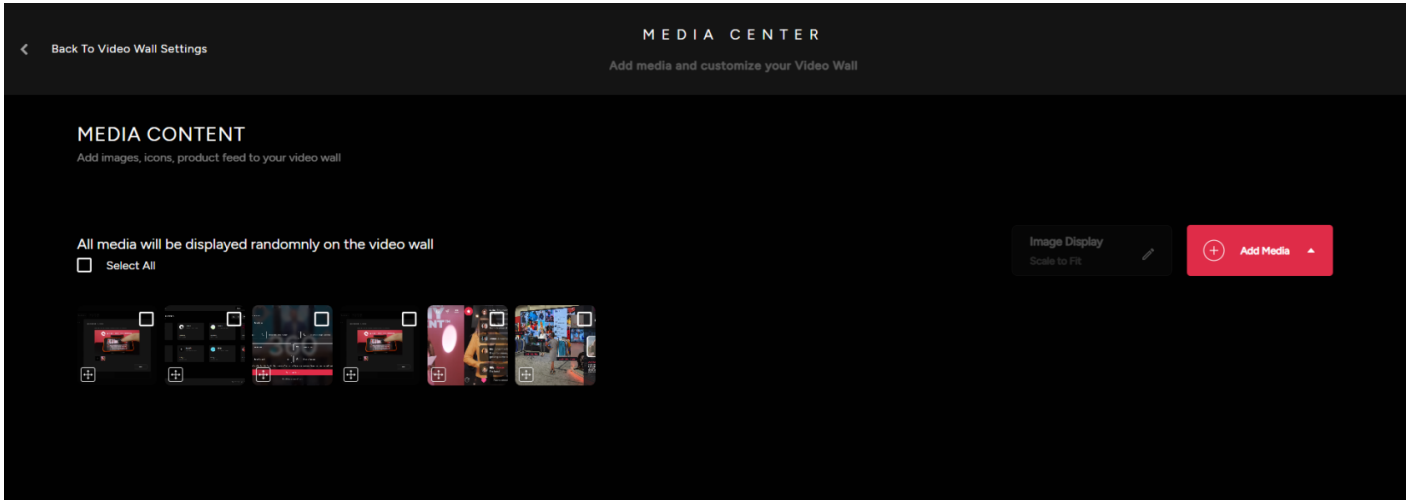

4) If Stream Chat is included, personalize stream message settings to fit your style.

5) If Poll Bot is included, personalize Poll Bot Display Settings

Media Content

5) Personalize and manage the content that will appear on the Video Wall. Upload images, videos, import items from Event Product Feed or add icons from our Icon Packs.
