

# Web Video Wall

## Create Web Video Wall

- Whether you are setting up a Web or App Video Wall, the configuration process is identical. Here's how you can create your very own Web Video Wall.

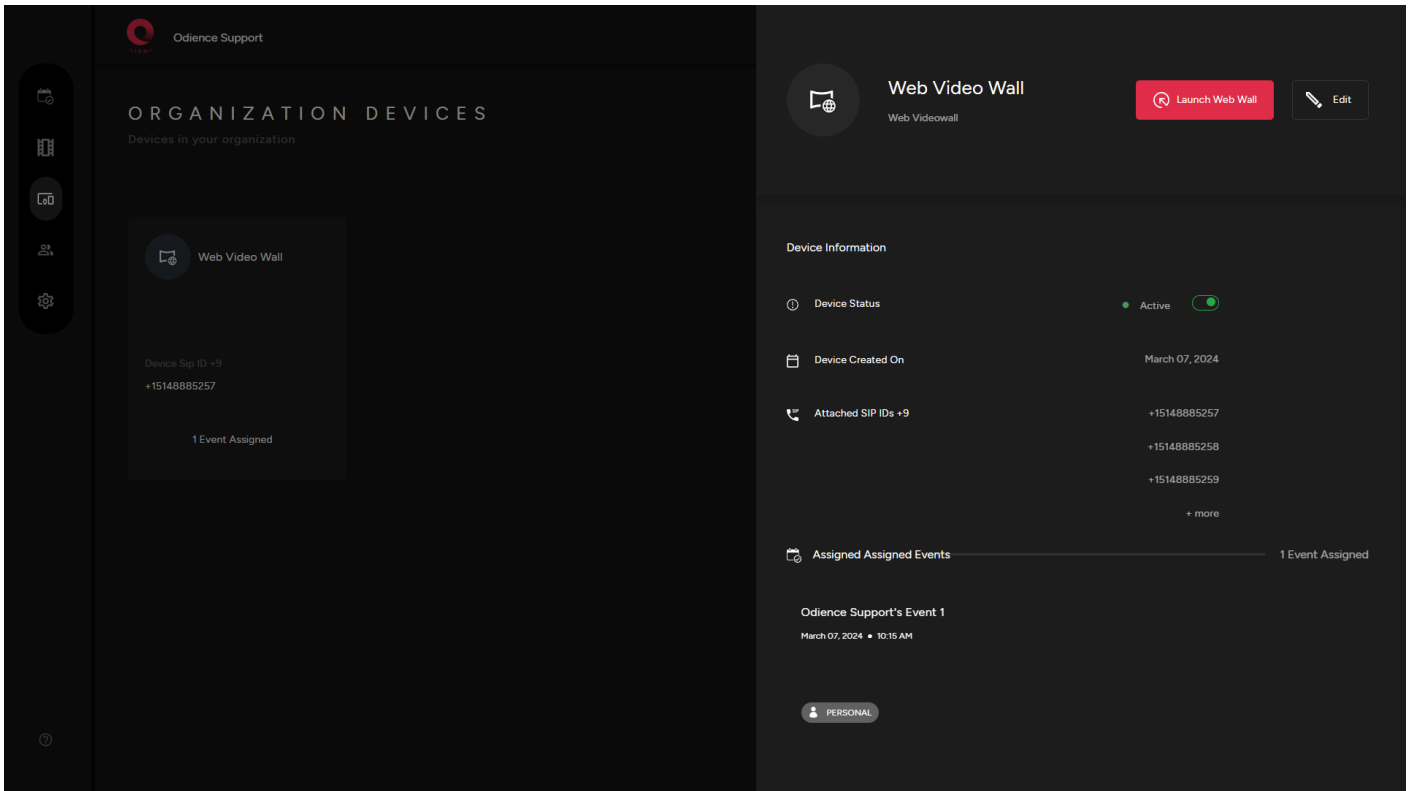

1) Provide a Wall Name, select the Wall Type & then Assign video wall to an event.

The screenshot shows a dark-themed configuration page titled "ADD VIDEO WALL" with the subtitle "Enter your Device details." The page contains two main sections. On the left, there is a "Wall Name" field with a text input box containing "Enter Device Name" and a "Wall Type" dropdown menu currently set to "APP". On the right, there is an "Assigned Event" section with a calendar icon and a red "Assign an Event" button. Below this is a large dashed box containing the text "There is no event assigned to your Device currently".

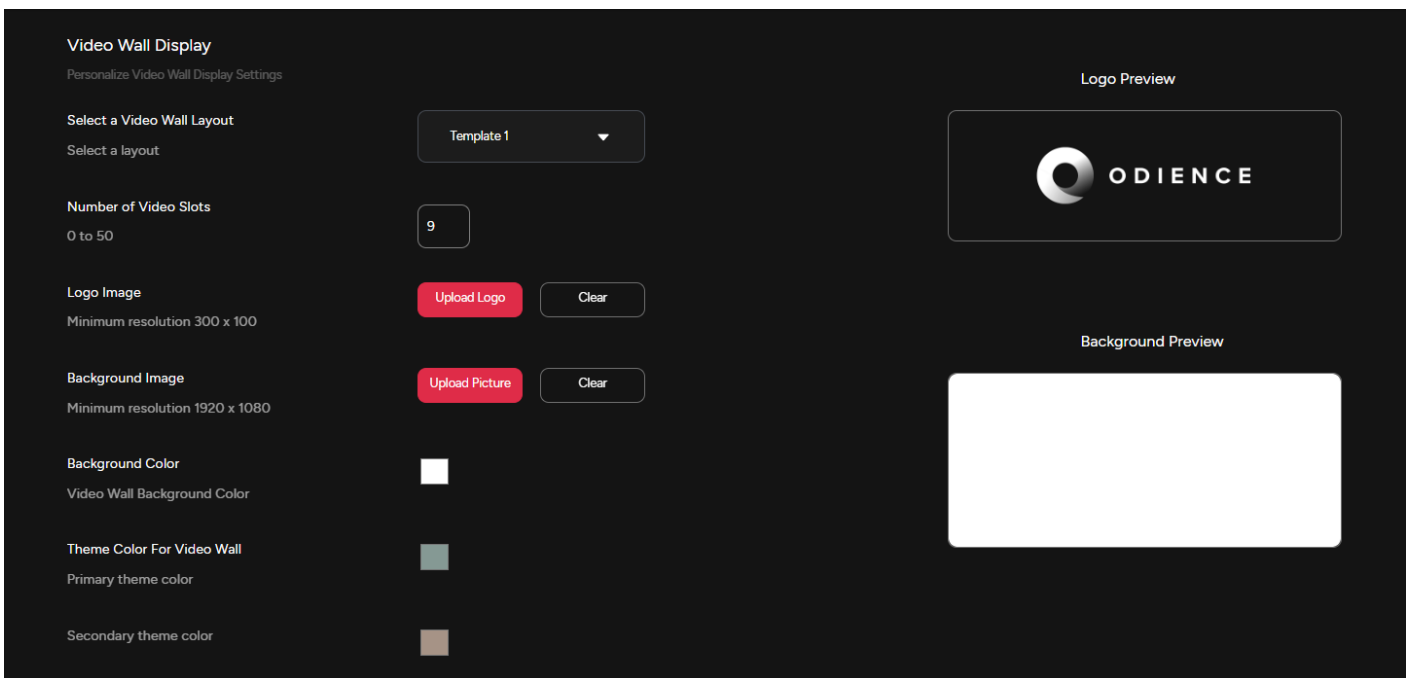

## Launch

2) After creating your Video Wall, click on your newly created device & launch Web Video Wall.

## Customize

2) Customize Video Wall display settings to fit your style.

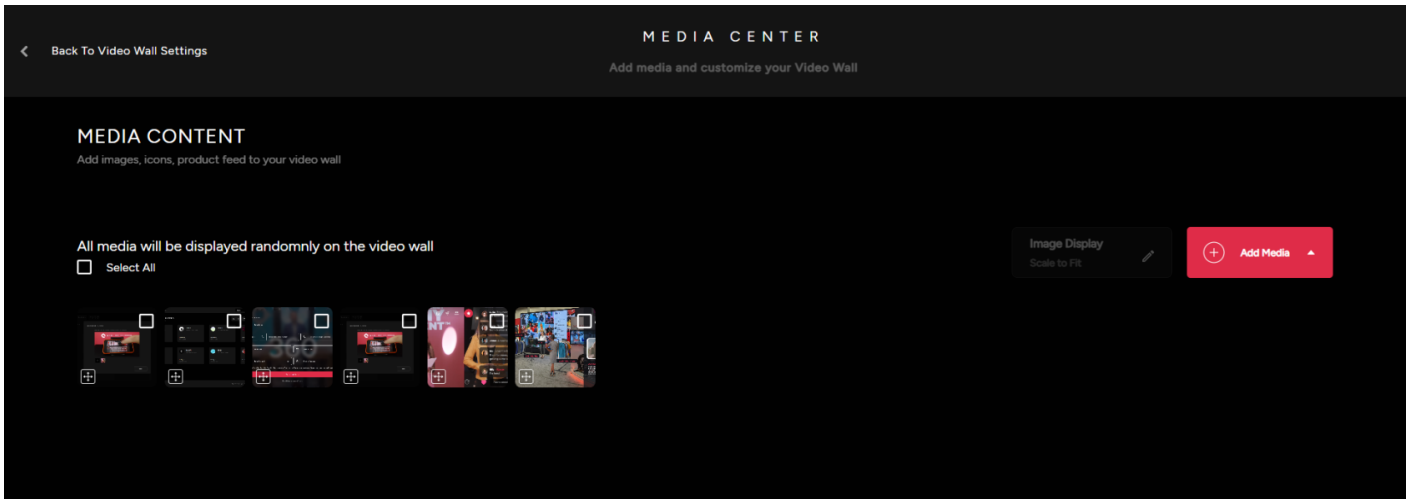

3) Personalize Stream Message Settings.

4) Personalize Poll Bot Display Settings.

## Media Content

5) Customize & manage the content that will appear on the Video Wall. Upload images, videos, import items from Event Product Feed or add icons from our icon packs.
